

# Minimum Separation Distances For Leaching Or Filter Beds

Building Code required separation distance  
recommended separation distance

Raised leaching and filter beds have increased separation distances. The elevation of finished grade minus existing grade x 2 is added to the minimum separation distances.

For Example: The difference between existing grade and finished grade elevation = 1.5 metres (5 feet)  
 1.5 metres (5 feet) x 2 = 3 metres (10 feet)  
 Therefore, add 3 metres (10 feet) to all separation distances i.e., 15 metres (50 feet) to drilled well now becomes 18 metres (60 feet)
